

The background of the cover is a stylized world map in shades of blue and grey. Three radio towers are depicted: one on the left, one in the center, and one on the right. Lines connect the towers to various points on the map, suggesting global radio signals. The title is presented on three horizontal banners that appear to be part of a continuous scroll.

PREFACE

The preface to the third edition of *World Radio Handbook for Listeners* must primarily be an appeal to all broadcasting corporations and interested listeners all over the world to assist me in making its contents as complete and exact as possible and by spreading knowledge of it.

The task of W. R. H. is to create a practical link between broadcasting stations and listeners interested in the broadcasts of other countries. Each individual broadcasting corporation is interested in as many listeners as possible listening to the broadcast for foreign countries; it is consequently interested in the service that can be provided for them by W. R. H. in this matter, and it must be in their own interest to give a helping hand in return to W. R. H. by, amongst other things, regularly furnishing the editorial office with information about activities and broadcasts, and in connexion with special transmissions or DX broadcasts or in other ways to call the attention of listeners to W. R. H. This is already done by some wireless stations, and in this connexion I owe special thanks to Mr. Edv. Startz, "The Happy Station PCJ". I thank the many broadcasting corporations which in different ways have evinced interest in W. R. H. It is hoped this may continue and be further developed, spreading to those radio corporations whose interest in the work of W. R. H. has hitherto been lacking. To these latter I would say: *By lending a helping hand to W. R. H. you help yourself and serve a good cause.*

How can the individual listener, listeners' organizations and DX clubs assist? Amongst other things by sending me a report now and then about their listening and your wishes and suggestions for the improvement of its contents, and by telling your friends and acquaintances of the increased profit obtained in listening as a result of W. R. H. W. R. H. is happy to observe an ever-growing contact with listeners in countries all over the world. This entails an extensive correspondence, but almost every letter is a pleasure and thus worth the work. I would therefore say to every purchaser of W. R. H. wherever he be: *Send me your criticism and wishes and, perhaps, a report now and again.*

My thanks are due to UNESCO for the editorial help it has afforded me in sending the valuable reports on broadcasting in Europe and Latin America drawn up by "Divisions des Besoins Techniques l'Unesco", and also to the international broadcasting organizations: l'Union Internationale de Radiodiffusion, Geneva, and the International Broadcasting Organisation, Brussels.

I thank Det Danske Selskab (The Danish Society) and many of the Danish official representatives abroad for the valuable help, which has been afforded me in various ways.

O. Lund Johansen.

PUBLICATIONS

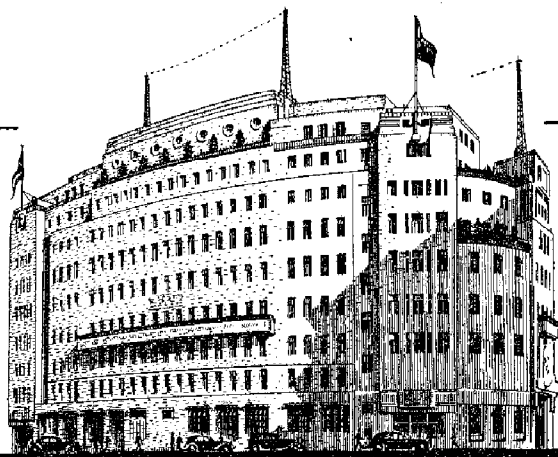

LONDON CALLING

Follow the BBC shortwave broadcasts with London Calling! Each week it publishes advanced details of programmes, wavelengths and coverage of the General Overseas Service in English and of the special Regional Services in English and other languages. London Calling also contains illustrated articles on life in Britain and abroad. Annual subscription (post free) 10/- sterling, or the equivalent in local currency.

THE LISTENER

You will enjoy reading this journal which publishes each week the best of the talks broadcast by the BBC. These talks are given by experts and cover a wide range of subjects including world problems, history, philosophy, art, music, literature and drama. Annual subscription (post free) 17s. 6d. sterling, or the equivalent in local currency.

Write for a specimen copy of London Calling and The Listener, mentioning this advertisement, to BBC Publications, Scarle Road, Wembley, Middlesex.

INTRODUCTION

The practical information given in the following section concerning broadcasting in each individual country includes:

The difference in time between normal clock time in the country in question and Greenwich Mean Time and whether the country in question has introduced summer time. *All times listed in the surveys are Greenwich Mean Time (G. M. T.).*

The address of the broadcasting companies in question.

The names and titles of the leading personalities in each company.

The stations belonging to the company in question, giving their call-signs for short wave stations, frequencies, and corresponding wavelengths, together with the power expressed in kilowatts. For Europe, North Africa and the Near East all broadcasting stations are shown, and for other countries all short wave broadcasting stations.

Each short wave station has its own identification call-sign consisting of 3—5 letters or combinations of letters and figures, of which the first, or the two first, show the nationality. Some short wave stations, for example, the American, employ the identification call signs when announcing.

Long and medium wave stations are divided into *Main stations* which are so powerful that they can generally be heard in the whole area of the country in question, and from which most of the broadcasting emanates, *Regional stations* which can be heard within a certain area of the country in question, and whose broadcasts consist partly of retransmissions of the programmes of the main stations and partly their own programmes, and finally, *Relay stations* which solely retransmit the programmes of main stations. The relay stations are the weakest, and are local stations which can only be heard within a small area.

Most of the short wave stations use dirigible antennæ, that is to say, broadcasts are directed towards particular areas, and these are therefore termed the various services: European service, Near Eastern, Middle Eastern, Far Eastern, Pacific, Latin-America, Caribbean service etc. The language and the frequency employed varies in accordance with the area to which the broadcast is directed.

Daily Programmes. Under this heading will be found information concerning the total broadcasting hours, *expressed in Greenwich Mean Time*, of the different frequencies employed during broadcasting hours, and a survey of the day's broadcasting.

Frequency and wavelength.

Frequency or wavelength is divided into following groups:

Long waves with frequencies from 133 kc/s (1961 metres) to 500 kc/s (600 metres).

Medium waves with frequencies from 500 kc/s (600 metres) to 3000 kc/s (100 metres).

Short waves with frequencies from 3000 kc/s (100 metres) to 30000 kc/s (10 metres).

Megacycles, kilocycles, metres are three different terms for the wave length. 1 megacycle is equal to 1000 kilocycles. Megacycles are changed to kilocycles by multiplying megacycles by 1000. Kilocycles are changed to megacycles by dividing by 1000. Kilocycles are changed to metres by dividing kilocycles into 300000. Metres are changed to kilocycles by dividing metres into 300000. Metres are changed to megacycles by dividing metres into 300. — Kc/s means kilocycles per second = 1000 oscillations per second.

Short waves are divided into the following metre bands (m. b.):

49 metre band — 41 metre band — 31 metre band — 25 metre band — 19 metre band — 16 metre band — 13 metre band and 11 metre band.

Many short wave stations lie outside these bands. The 60 and 80 metre bands are used for local broadcasting, i. e. for reception over relatively short distances like, for example, South and Central American stations and stations in Central Africa.

In order at all times to obtain the best possible reception of shortwave broadcasts, stations change the frequency used at different times of the day and night; the season of the year is also a factor when settling the size of a frequency.

How to tune in to your favourite shortwave station.

Practice is required to adjust the receiver correctly to a shortwave station. A movement of only a hair's breadth may give the correct adjustment. When a shortwave station is found it must be finely adjusted by gently turning the scale button backwards and forwards, whilst at the same time screwing up the volume control so much that the station in question can be identified. If the scale button is turned too quickly a weak station may be missed.

Reception conditions for shortwaves can be very capricious. After listening to a far-distant station for a short time it can disappear entirely (fades), and does not come again immediately.

The same broadcast is often sent simultaneously on several wavelengths. Should you have adjusted the receiver to the station to which you wish to listen and reception is unsatisfactory, try the other wavelengths used by the station during the period in question.

How to identify a shortwave station.

Should you chance to hit upon a station which you wish to listen to and identify, do as follows: Read the approximate frequency, which is given in megacycles, kilocycles or metres. Look in the frequency table for the stations lying in the vicinity of the frequency. When you have limited the station to one or two possibilities and observed the programme and language, check these against the programme surveys.

QSL Card.

As shown in the survey of the various broadcasting countries, many of the stations are interested in receiving reports from listeners concerning their broadcasts. Stations acknowledge these by sending listeners a QSL card, or a letter. In the case of most stations it is stated if reports are answered by a QSL card.

Many shortwave listeners make a hobby of collecting these QSL cards. Such reports can in most cases be drafted in English, but to the South and Central American countries preferably in Spanish. The report should contain information concerning wave length, date, time, programme listened to, intelligibility, strength and whether there was any fading e. g. variable strengths (QSB), interference from another station (QRM) and static e. g. atmospheric interference (QRN). If it was an amateur station the report must contain the call letters of the station working. — Give details of your location, type of receiver and aerial. If postage is wanted enclose with the report an International Reply Coupon, obtainable at most post offices. *Greenwich Mean Time (G. M. T.) is employed in giving the time.* — The complete address for each station will be found under the various surveys of the countries broadcasting.

The following descriptions are used:

Intelligibility.	Strength.	Interference:
QRK1 — unintelligible	QSA1 — unreadable	QRM — interference from another station
QRK2 — partly unintelligible	QSA2 — weak	QRN — atmospheric interference (static)
QRK3 — intelligible with difficulty	QSA3 — fairly good	QSB — variable strengths (fading)
QRK4 — quite intelligible	QSA4 — good	
QRK5 — easily intelligible	QSA5 — very good	

^ From the Swiss shortwave broadcasts. Announcer Barbara Zweiacker presents "Tony Bell and His Orchestra". You also hear her presents "Among us Girls".
 < Programme Director for P. C. J. (Holland) Mr. G. Sluizer during a broadcast from Radio Nederland PCJ Wereldomroep
 The chief of the French National Orchestra Mr. Ch. Munch.

v Miss Bodil Ciccarella, daughter of the Danish author Berge Janssen, is the leader of the Danish and Norwegian broadcasts on short-wave from Rome. Her voice is heard every evening at 20.15 G. M. T. exc. Thursday and Sunday on 25.40 m.

Robert Gladwell, Announcer, reading the news in the B. B. C. Overseas Service from London.

GMT with Chinese National Anthem played by military band.

Reports from Listeners: All letters or communications are answered by letter and acknowledged over the air as well during "Symphony Hour" programme on Saturdays and Sundays. When writing to XGOY, return postage should be enclosed. Requests for musical selections are complied with whenever possible.

Message to Listeners:

"Although the world is not yet free of wars, the Chinese International Broadcasting Station feels that by means of radio we can create a higher measure of sympathetic understanding between peoples of the east and the west, break down the prejudices of race, colour, religion and creed and built a better world where war may not exist. We are trying to tell the real story of China to the world, without elaboration or excuse; we want to create an interflow of cultural knowledge between the countries of the world and to let the world come into close contact with the real people of China, to know the history, the literature, the arts, the philosophies as well as the modern science and research being carried on in China, and we want to learn from the world as well. This is the only sure path towards a permanent peaceful democratic world."

Pacific Zone -- G. M. T. minus 8 hours.

The Voice of the United States of America is the radio medium employed to promote the better understanding of the United States among the peoples of the world and to strengthen cooperative international relations.

36 shortwave transmitters in the United States, ranging from 10,000 to 200,000 watts in power, 10 transmitters on the Pacific Coast, 26 transmitters in the Middle West and on the East Coast. Government owned and controlled shortwave relay operations at Honolulu (KRHO), Manila and Munich. Other relays through arrangements with Domestic Broadcasting of other countries, such as Austria, B. B. C. in Great Britain, France, Germany, Italy, China and Korea. Programme schedules of "The Voice of the U. S. A." are prepared in New York and mailed upon request to interested groups or individuals abroad. They can also be obtained through the local U. S. Information Office of every country.

All applications for monthly programmes, for further information on current programmes, radio reception reports and comments, should be sent direct to the "Voice of the U. S. A."

The International Broadcasting Division is responsible for the planning, execution and content of programmes. Programmes are written, produced and broadcast from studios in New York City. By contract the National Broadcasting Company (NBC) and the Columbia Broadcasting System (CBS) produce programmes, which are integrated with the output of the Department of State to Europe, Latin America and the Far East.

LEADING PERSONALITIES: The International Broadcasting Division (IBD) is a division of the Office of Information and Educational Exchange (OIE) of the Department of State, and is under the jurisdiction of the Assistant Secretary of State for Public Affairs, George V. Allen. Officials of the O. I. E. and I. B. D. directly responsible for the operation are: William T. Stone,

Director of O. I. E. — Leland Barrows, Deputy Director, O. I. E.

I. B. D. Officials are: Charles W. Thaper, Acting Chief. — Forney A. Rankin, Associate Chief, in charge of high frequency conference affairs and plans. — Musio Delgado, Acting Associate Chief, in charge of the Washington office. — Robert Ross, Program Branch. — John Doud, Chief Facilities Branch.

ADDRESSES of the main companies and organisations, are as follows:

The Voice of the United States of America, Office of Information and Educational Exchange International Broadcasting Division, U. S. Department of State, 224 West 57 Street, New York 19.

Washington headquarters of I. B. D. are at 18th and Pennsylvania Avenue, N. W.

United Nations Network, Radio Liaison Office, United Nations, Lake Success, New York.

The Associated Broadcasting Inc., Mark Hopkins Hotel, San Francisco.

Columbia Broadcasting System Inc., 485 Madison Avenue, New York 22.

Crosley Corporation, 149 West 9th Street, Cincinnati.

General Electric Company, 1 River Road, Schenectady, New York.

National Broadcasting Corporation Inc., 30 Rockefeller Plaza, New York 20.

Westinghouse Radio Station Inc., 275 Tremont Street, Boston 16.

The World Wide Broadcasting Foundation, 133 Commonwealth Avenue, Boston 16.

Armed Forces Radio Service, A. P. O. 500, San Francisco.

STATIONS

U. S. A.s shortwave stations are divided into two main groups: East Coast stations, whose call-letters begin with W, and West Coast stations whose call-letters begin with K. In some cases the other letters of the call-sign denote the ownership of transmitter. There are one or more frequencies for each call-sign, and each company may change the frequencies used for the different call-letters.

The U. S. government, through the Department of State, leases the transmitters from the private operators. CBS and NBC, under contract with the State Department, programmes most of the service. The State Department has retained the direct programming of the languages of Eastern Europe — and China and Korea in the Far East. (Only WRUL and WRUW, operated by the World Wide Broadcasting Foundation, are partially programmed independent of the government operation.)

DAILY PROGRAMMES

International shortwave programs from the United States fall into three main categories: news, editorial and information which includes news analysis, editorial comment and all basically informational programs such as round table discussions, documentaries, etc., music and entertainment.

MESSAGE TO LISTENERS: Reports are answered by QSL cards with letters written if special information desired. Skeds sent on request. Return postage optional.

* The United Nations Radio operations have been altered by the General Assembly in Paris, which may be terminated by the time many readers examine the information below. At the time of going to press it is impossible to anticipate full details of the transmissions thereafter. It may be expected, however, that many of the well-established arrangements will be restored, and therefore the UN schedules as existing before the Paris Assembly of September 1948 et seq. are re-published below as a general guide. In any case, the Latin American and Pacific services have remained unaltered throughout."

Daily Programmes:

The United Nations broadcast daily Monday through Saturday, except as noted, programmes of news, com-

ment, interviews, and background talks, on the work of the organization and of the Specialized Agencies. The broadcasts, mostly by shortwave, are made possible through the cooperation of the U. S. Department of State, the International Service of the Canadian Broadcasting Corporation, and the World Wide Broadcasting Foundation.

To Europe: From 14.15-15.15, 17.30-19.00, 21.35-22.15.

ELECTRICAL MEASURING INSTRUMENTS

The Universal Instrument **TOVAMETER** is the only universal instrument possessing common linear graduation for direct current and alternating current.

This has been achieved by a device for which patent has been obtained and which in the highest degree facilitates the readings, prevents mistakes and renders superfluous special (coloured) marks.

It offers furthermore the advantage that all readings of alternating currents can be done right from zero.

29 measuring ranges for: Volt, mA, and Amp. = ∞ further for ohm, decibel and capacity. Demand our English lists for particulars. For further ranges separate shunts and transformers can be delivered.

SMALL PANEL TYPES

Diameters: 63-83 and 100 mm.

BIG PANEL TYPES

Diameters: 130-150 and 225 mm.

SMALL SQUARE TYPES

frame Dim.: 90 × 90 mm with Tubus Diam.: 65 mm.

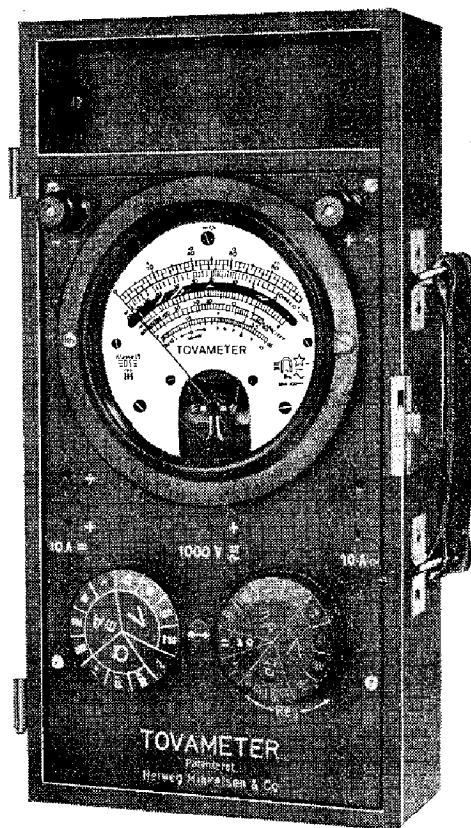

BIG SQUARE TYPES

frame Dim.: 145 × 145 mm with Tubus Diam.: 132 mm.

PORTABLE LABORATORY TYPES

MEASURING-BRIDGES
